

Once the project has been pulled from the respective repository, it only takes a few more steps to have it up and running.

1. Check the provided "libs" directory for four external libraries

- jcommon-1.0.23.jar
- jfreechart-1.0.19.jar
- jOpenDocument-1.4rc2.jar
- opencsv-3.9.jar

Depending on your IDE, you will want to include those dependencies for the chart and the two parsers to work as intended.

Naturally, the build settings of your IDE may require you to configure it properly before being able to run the application but that is something IDE-related.

Besides, seeing how well you dealt with the first assignment, I have no doubt that you will have the app running in no time. ;-)
